

NOW RECRUITING, Phase II Studies:**IMMUNOLIGHT THERAPY FOR CANINE CANCER****Study Benefits Include:**

- ✓ Variety of free initial staging tests
- ✓ Free follow-up visits
- ✓ Free Immunolight Therapy sessions

Enrolling dogs with solid tumors:

- Oral Melanoma and Other tumor types
 - Dogs with tumors of the skin, toes, mouth, perineum, and other sites MAY be eligible.
 - Most internal tumors will NOT be eligible.
 - Dogs having received prior treatment for their tumor will be considered, if that prior treatment is no longer helping.
 - Dogs may not receive other treatments for their tumor during the study.

After a successful phase I safety study, the goal of this new research project is to continue studying and refining Immunolight Therapy, an innovative approach to cancer treatment.

We work with pet owners and primary care veterinarians to help determine eligibility, and to advise on any testing that may be needed before coming to NC State. The study is being conducted by doctors in the Radiation Oncology section.

This study is financially supported by Immunolight, LLC., and NC State CVM.

More information about Immunolight Therapy, and study eligibility, can be found at: www.immunolight.com, or www.ncstatevets.org/radiation.
