

NOW ENROLLING DOGS WITH ORAL MELANOMA

NC State University Veterinary Hospital is looking for dogs with stage I or II with oral melanoma for a clinical trial using a new therapeutic drug (GM-1111) and standard of care radiotherapy.

The purpose of this clinical trial is to evaluate whether the novel therapy has:

1. Direct anti-cancer activity,
2. Capacity to enhance the effectiveness of radiation therapy in the tumor, and
3. Ability to protect against side effects of radiation therapy.

The clinical trial will also collect safety data.

Inclusion Criteria:

- Weigh more than 3 kilograms (6.6 pounds).
- Histopathologic diagnosis of oral malignant melanoma.
- MUST have an oral tumor (< 4 cm diameter) present at enrollment.
- No metastatic disease.
- Owners must be willing to give an injection under the skin, once daily for 6 weeks.
- Radiation therapy is given as four once-weekly treatments.

All dogs will receive drug & radiotherapy, free of charge.
